

# Mounting kit upgrade for the BQ series tanks (625x680)

We are pleased to inform you that the BQ series of tank mounting kits has been updated with the introduction of a new support with a special design. This change has been made following the need of constant improvements of the quality of our products, adapting them to the technical equipment of the new vehicle ranges.

The technical features of this new version can meet all the requirements on the market, replacing all the previous version with a single solution.

The standard mounting kit code remains unchanged as shown in the catalogue, the 135l tank kit code 135903BQLX2 is merged with the standard version 135903BQLX0. After these changes we managed to create the new spare parts numbers as shown in the table below:

WAS	BECOMES
<p><b>538205BQLG4 x2</b></p>  <p>External welded reinforce</p> <p>135903BQLX0</p>	<p><b>538205BQLGD x2</b></p>  <p>left recess</p> <p>right recess</p> <p>135903BQLX0</p>
<p><b>538205BQLG8</b></p>  <p>left recess</p> <p>External welded reinforce</p> <p><b>538205BQLG9</b></p>  <p>External welded reinforce</p> <p>right recess</p> <p>135903BQLX2 (135 lt)</p>	<p><b>53800404397 x2</b></p>  <p>Internal reinforce</p> <p>135903BQLX0</p>

<b>WAS</b>	<b>BECOMES</b>
	<p>The new universal hole pattern allowed us to integrate the holes pattern of the new frames recently introduced on the market into a single solution, without handling specific supports or drill new holes on the chassis frame.</p> 
	<p>The new support shape can save 17,5mm of depth for the bracket + tank assembly, making it an extremely flexible solution, which can be installed quickly and easily even on vehicles with side fairings.</p> 

Our sales/technical office is available for any further information you might require.
