

Bypass valve for pumps twin flow bent axis

Please note that we have updated the design of the bypass valves for TFP piston pumps with double spout 53/35, 53/53, 70/35 and 70/53 to offer even better performance.

These new valves are in fact lighter than two kilograms (2 kg) and allow to reduce considerably the moment of application weight pump + valve that weighs on the PTO.

The new valves will be introduced gradually over the next few months, replacing the current model. The sales codes are then changed as follows:
